

Guest WiFi Self Registration for One-Day Access

Guests of the university can obtain WiFi access for a single day while on campus by following these steps. Device types will vary, but the basic process is essentially the same.

1. Go to the device's WiFi settings to connect to the "beachnet-guest-access" network.
2. Open a web browser, which will automatically open the beachnet-guest WiFi sign-in page. It looks like the image below.
3. Click on the blue "Self-register" link to create a one-day guest wifi access pass. It will take the user through the steps, which will require a personal email address.
